WORK EXPERIENCE

2023 - ....

Freelance l China

I am a self taught software engineer seeking to leverage my professional expertise and experience into a company with high professionalism and wide opportunities for career growth. I am an extremely ambitious and self organized person with sharp and logical mindset. I started learning programing in May 2023. I have a long experience in banking field, but even in those years I have always been interested in coding. Since I worked a lot using Microsoft excel I taught myself VBA to be able to automate my and my colleagues everyday tasks. In 2023 year I made a small VBA project for the Airport in Armenia. All my projects done during my learning journey you can see in my portfolio.
